### Abstract

*Current continuously with profound and complex changes in the international pattern, the deepening of economic globalization, political multi-polarization continues to strengthen, the international security problem is increasingly complex, socialist modernization construction in China is entering a new eriod, the party's 19 big army blue prin, draw the outline of the new era of weapons dream is the great rejuvenation of the Chinese nation important based on the Chinese dream, the army ideological and political education work is an important part of military construction work, a strong army must need to have a firm's soul and faith as the support, grassroots units of the ideological and political education work is facing the international and domestic new opportunities, new challenges, The defects of the traditional ideological and political education are increasingly prominent, and the effectiveness of the ideological and political education work in the grassroots army cannot be well improved. The ideological and political education work innovation of layer army is imperative.*

### Keywords

*dream of a strong army, grassroots troops, ideological and political education, innovation*

### 1. Introduction

In retrospect, from the opium war, the first sino-japanese war to the war of resistance against Japan, the war of liberation, Why did we finally turn the tables? The final victory is inseparable from the firm revolutionary belief, the correct command of the party leaders and the strong spiritual armed forces of the communist army. Reflecting on history, we can see the importance of ideological and political education in the army. Ideological and political education work is the important foundation of the army,

is also one of the main inherent advantages, our army dream to achieve, it is necessary to do the army ideological and political education the basic work, strengthen the fighting spirit, cultivate excellent fighting style, this is the inevitable requirement of modernization, the army is path of weapons dream realized in our country, but also the important guarantee of national security and development. The steady advance of the goal of strengthening the armed forces will escort the realization of the two centenary goals and the Chinese dream of great rejuvenation.

The army ideological and political education in our country has a long history, from the army, the army ideological and political education in the further development, with the unceasing change of domestic and foreign social political and economic development, the army ideological and political education research in China has been the new achievements, for our ideological and political education innovation work provide certain theoretical basis. Army, for example, content and pattern of the ideological and political education research, in view of the traditional ideological and political education content coverage of thin, narrow, *Li Jiyan in research on the contemporary youth ideological and political education innovation* put forward the ideological and political education should include strong state of “socialist civilization education, basic education, the national spirit education, religion, faith, trust and faith education, education of scientific spirit and humanistic spirit, the new moral education of the socialist market economy”, etc.

To foreign political preaching the word is a very sensitive and more exclusive, in fact, they call it the “spiritual education”, “political training”, etc., the military spirit education, is on behalf of the ruling class’s will, to a certain politics into officers and soldiers thought and action, maintain the unity of the army, strengthen the organizational discipline of the army. Taking the US military as an example, its education includes values and goals education, military history education, international situation education, etc. In The article *sociopolitical training in the military: an overview for analysis*, *Stephen westbrook* mentions sociopolitical training, or ideological and political education. He believes that the army should strengthen the social and political training of the officers and soldiers, in order to promote the integration of the country, from the political grasp of the army, improve the combat effectiveness of the army.

## 2. Method

### 2.1 Field Survey Method

Practice is the criterion for testing truth. This study conducted a field survey of grassroots troops, through field investigation, I found the following questions.

The first, the mode and content of education are single and ineffective. After visiting survey of the army and armed police forces at the grass-roots level to understand the basic forces of ideological and political work are mainly the classroom learning, learning task arrangement and regular news watch, classroom learning mainly political chief to teach the knowledge content, daily news watch is also a fixed time to watch, watch the end of the ends, the ideological and political education in class don’t

have much two-way communication and interaction between subject, the subject status of the educated in the process of education reflect not to come out, and watching the news on state is not doing a very good follow up to know when the new dynamic warrior at the grass-roots level to watch after the result and feedback, as a result, they do not internalize what they have learned and seen well to help establish correct values. Traditional ideological and political education theory is strong, and the content is relatively simple, daily ideological and political work is like “empty talk” theory, easy to be considered with the social reality and the reality of life seriously out of line with a piece of empty talk. On the other hand, as the carrier of ideological and political education, educational methods have gradually been unable to adapt to the changes of the new situation and the needs of the times.

Secondly, Educators’ daily workload is large and professional. Since 2015, in order to optimize the size and structure, improve the leadership and management system of all services and arms, and improve the overall combat effectiveness of the armed forces, the reform of the armed forces has been continuously deepened and important achievements have been made in various aspects. At the same time, the assessment mechanism of grassroots cadres in the army has been constantly improved, and the requirements for the physical fitness and comprehensive quality of grassroots cadres have also been improved. Army cadres at the grass-roots level on the one hand, bear the intense military training mission, on the other hand with grassroots units of a large number of tasks sex work, their workload is far beyond the load, in many cases, so that sex education emphasizes the task, the pursuit of number, work without thorough nor truly put in place, and stay at the surface for examination. Political cadres at the grass-roots level in addition to the huge workload, difficulties still exist on the other hand, they are not professional trained, ideological and political education and participation in professional training opportunities also is less, when carrying out ideological and political education work is also in touch stone across the river, in the process, accumulate experience, it takes a lot of time and energy, but also in some aspects of the results are often unsatisfactory.

## *2.2 Interview Method*

During the research process, officers and soldiers at the grass-roots level were interviewed in detail. Through the interview survey, we found the following problems.

Firstly, the educated population is diverse. Grassroots fighters come from all over the country, and their social, cultural, family, environmental and other backgrounds are very different. The age range is also very large, including “after 80”, “after 90” and even “after 00”, the difference in education level is obvious, junior high school culture to undergraduate, master’s culture have the corresponding proportion. And before enlistment, their personal experience is different, in carrying out ideological and political work often there will be a part of people can’t understand, some people can accept, some people think that every situation, a lot of people holding the “handle” mentality, unable to effectively stimulate the learning enthusiasm of the grassroots fighters and participation enthusiasm, led to the actual effect of ideological and political education is very low.

The second, Under the influence of various cultures and social customs. With the deepening of

globalization, all kinds of culture is also in constant collision, the development of network technology has also made grassroots officers and soldiers to information way simple, easy to contact without the filter of the good and bad are intermingled of information and culture, for example, some problems for our country the network constantly evaluate false twist, trumpeting their own values, in recent years many discredit the hero model figures and the revolutionary martyrs case fully shows the ulterior motives, some people in a certain period, The extreme and one-sided remarks and incitement of some people with ulterior motives and their “water army” may seriously affect the correct understanding of the problem of grassroots officers and soldiers, especially the young soldiers who have not yet established the third outlook. On the other hand, have rich material basis and convenient life, at the same time, people are also more diversified value orientation, also contributed to the very right of the reality with concepts such as growing, bad atmosphere in society’s influence on the grass-roots troops also more and more obvious, the pursuit of material benefits of thought in the growing, make a lot of people enjoy over-pursue status pursuit treatment, thought it was the same thoughts already more and more out of the current social reality, thus, individualism and egoism is more and more obvious. his is not conducive to the grassroots troops to establish a correct outlook on life and the correct value orientation.

Finally, “Electronic opiates” are eroding mental and mental health. When I visited the grassroots army, I found that when it was time to rest, everyone was sitting on the bed, on the ground or on the lawn, holding their mobile phones and thumbs across the screen. And many others, obsession with fighters on the game at the grass-roots level degree is high, they are almost occupied the grass-roots troops in addition to training, and other learning is all her spare time, and some of the network game’s character set and all kinds of game concept with historical facts and there are many of socialist core values, and easy to cause cognitive gap, this is very detrimental to the soldiers at the grass-roots level of spiritual civilization construction. Appropriate and reasonable games are conducive to physical and mental relaxation, but excessive indulgence in Internet and mobile games is harmful to the eyesight, psychological and mental health of grassroots officers and soldiers. Secondly, the unscientific use of various social networking sites and apps also leads to a variety of problems, such as affecting normal rest, reducing daily training and learning efficiency, reducing practical interpersonal communication, and not conducive to creating a good camp atmosphere.

### 3. Result

In view of the problems found in the field survey and interview survey, I explored the innovation path of ideological and political education of grassroots troops through 5 aspects.

Change traditional methods of ideological and political work. Faced with the diversified subjects of education at different levels and with different objects, the single indoctrination education method can no longer meet the needs of ideological and political education of grassroots troops in the new era, and it is necessary to change the working methods of ideological and political education. First of all, to

strengthen the subject consciousness, there need to further understand the education main body and particularity, pay attention to the education subject and education subject of two-way communication, communication and feedback, with the continuous development of educational technology, new media technology in the study, life and work is important, to carry out the ideological and political education must rely on grassroots units and to guide the right public opinion direction, can reasonable use a network to conduct grassroots forces of ideological and political education work.

Strengthen the building of the army's grass-roots political work force. Educators must lead by example and lead by example. Without improving the comprehensive quality of educators themselves, the level and quality of ideological and political education cannot be truly improved. Therefore, the comprehensive ability and quality of grassroots army ideological and political education directly affects the effectiveness of grassroots army ideological and political education. First, establish the training, selection and assessment mechanism of grassroots political workers. In the aspect of training, we should pay attention to the cultivation of systematic theoretical learning, practice and innovation ability, which should not be dogmatic. Secondly, it is necessary to improve the training system for grassroots political and industrial cadres, enrich the content of learning, stimulate the enthusiasm for learning, avoid too weak, superficial and empty knowledge, and ensure that grassroots political and industrial cadres constantly update and improve the professional knowledge reserve, so as to better serve the ideological and political education work of grassroots troops.

Firmly seize the initiative in ideological and political education of troops at the grass-roots level. Educators should take the Marxism theory as the guidance, the understanding of the dynamics, social development and the correct political direction and position, and maintain a high level of political acumen, the party's major policy and all kinds of policy to have a comprehensive understanding, at the same time, to continuously expand and consolidate the mass base, the social hot issues have their own views and opinions, to improve the ideological and political education work. Next, want to further understand the basic problems of the analysis of the present stage grass-roots troops, analyzing the cause of problems, issues, possible development trend and its inherent law of troops at the base of ideological and political education present situation have a system comprehensive understanding, in order to better "suit the remedy to the case", and constantly improve the level of grassroots officers and soldiers thought, political consciousness, moral quality, cultural quality, make grassroots officers and soldiers, only, both ability and political integrity, all-round development of good soldiers.

Establish a multidisciplinary and multielement joint education mechanism. In terms of discipline, ideological and political education is never just an educational problem of a single discipline, but also includes the interdisciplinary education of theory, law, psychology and morality. Grassroots army ideological and political educators should have a high comprehensive quality, and at the same time, they should explore relevant resources that can be effectively used, such as legal education and moral education, which can make up for the problems existing in ideological and political education, such as scattered content and single structure. Forces, family, society, etc., in the ideological and political

education to carry out the grassroots units cannot be limited within the scope of this in the army, to actively play the family and social forces at the base of ideological and political education, to establish a harmony family atmosphere, rich cultural background of the family for officers and soldiers at the grass-roots level has a positive role in the actual effect of ideological and political education, but also guide the right is the social public opinion direction, optimize the social climate, and gradually form the ideological and political education of many fusion education linkage system.

Enriching the cultural connotation of grassroots troops. The cultural construction of grassroots troops is an important carrier of ideological and political education. The good and strong cultural atmosphere in the barracks is of great significance to the sustained and effective development of ideological and political education in the grass-roots units. It is necessary to improve the cultural atmosphere of basic troops, combine leisure and entertainment, physical and mental relaxation with cultural learning and construction, so that cultural work can cultivate the sentiment of grassroots officers and soldiers, enrich the amateur life of grassroots officers and soldiers, and constantly enrich the cultural connotation of grassroots troops. And activities conducted by the time could be flexible, campaigns can be varied, activity time can choose a New Year's day, labor day, army day, National Day, father's day, mother's day and other special holiday, at the same time in a particular holiday as the theme, activity such as speech contest, includes design, organizing public welfare activities, etc.

**Table 1. Satisfaction Survey on Ideological and Political Education of Grassroots Troops**

	Very satisfied	Satisfied	General	Not satisfied
After 80	29.6	36.4	24.3	9.7
After 90	25.6	32.0	30.1	12.3
After 00	24.3	30.7	28.2	16.8

#### 4. Discussion

To build a people's army under the command of the party, capable of winning battles and having a fine style of work, is the party's goal of strengthening the army under the new circumstances. Listening to the party's command is the soul of our army's building and strengthening. Under all circumstances, we must strengthen the army's ideological defense line, gain an in-depth understanding of the theory, line, principle and policy, always uphold the party's absolute leadership over the army, and effectively fulfill our army's historical mission in the new century and at the new stage. The new era also puts forward new requirements for the ideological and political education work of the army, and the exploration of the innovative mode of the ideological and political education work of the grassroots army should be deepened continuously.

China's military reform is going on vigorously. The party thinks and plans for national defense and the army building from the overall perspective of national interests, and ensures that the army has the

confidence and ability to defeat all enemies who attack it. While deepening the reform of the army, the innovation of ideological and political education in grassroots units should also be carried out simultaneously, so as to avoid the problem that the body steps forward but the brain cannot keep up with the pace. Facing the problems existing in the ideological and political education of grassroots troops at the present stage, we should explore the innovative way of ideological and political education of grassroots troops, break through the shackles of ideological and political education of grassroots troops, and effectively lay the ideological foundation for the dream of strengthening the army in the new era.

Grassroots units of ideological and political education is not static, with the changes in the environment at home and abroad and the development of political economy, given our new mission in the new period, also gives the army ideological and political education new times connotation and grassroots units of the ideological and political education work in the original system and mechanism on the constant exploration and innovation, the innovation can't just stay on the educator and the educatee own level, but including the ideological and political education work, the overall concept and mechanism of innovation, integration of multiple disciplines, multi-agent, give attention to two or more things and actively play a social, family, and the various universities such as linkage effects, We will make innovations in ideological and political education in grassroots units better serve the dream of building a strong army and a strong nation.
